End of support for Windows Server and SQL Server is fast approaching

End of support for Windows Server and SQL Server is fast approaching. Without security updates and bulletins released by Microsoft, businesses may be exposed to security vulnerabilities and risks in their IT environments, leading to potential data breaches and compliance issues. Businesses need to take action now to ensure the continued security and reliability of their IT systems.

Optimize costs

20% of all support for Windows Server and SQL Server will be lost due to the end of support. By migrating your legacy systems to Microsoft Azure, you can optimize your IT budget and realize cost savings.

Reduce the risk of security breaches

Without regular security bulletins, there may be gaps in your security posture, making your environment vulnerable to cyber attacks. Regular security updates help reduce the risk of security breaches.

Enable digital transformation

Digital transformation becomes the strategic standard. Without modernizing, businesses may fall behind their competitors and fail to keep up with the rapidly changing technology landscape.

Data regulations and compliance pressure

As businesses aim to meet the requirements of regulatory standards, the cost of compliance can be substantial. Businesses need to consider the cost of maintaining current compliance standards and the cost of potential fines due to non-compliance.

Increase scalability & flexibility

To stay competitive and keep up with customer demands, businesses may need to increase operational efficiency and infrastructure. Cloud-based solutions can help businesses scale and meet their needs without incurring high costs.

Masterize your ROI

ROI calculation can be a complex process, but it’s essential for businesses to accurately assess the financial value of migrating to Microsoft Azure. Businesses should consider all costs, including initial investment and long-term savings, when assessing the ROI of IT modernization.

Extend your security

By moving to Azure, businesses can benefit from Microsoft’s 50 years of cloud experience and comprehensive security offerings. With global reach and dedicated teams, businesses can expect robust security measures and quick response times.

How Crayon Software Experts can help

Crayon’s application of methodologies results in a larger overall improvement in your IT. IT services are more impactful, while reducing total annual costs.
